Green Sea Turtles

(Chelonia mydas)

The green sea turtle is an herbivore, making it unique among other sea turtles. When grazing on seagrass, they increase the nutrient content of seagrass blades. Protecting green sea turtles also helps the local economy as tourists love spotting them. Don't let them disappear from our waters!

Save our Ocean,
Protect our Future!

THREATS

Climate change

Bycatch

Plastic pollution

Destructive fishing

Umbrella species

Healthy ecosystems

Sustainable ecotourism

Growth of local economies
